

1 Which steps are needed to find the actual width of a xylem vessel viewed in transverse section using a $\times 10$ objective lens?

- 1 Convert from mm to μm by multiplying by 10^{-3} .
- 2 Calibrate the eyepiece graticule using a stage micrometer on a $\times 4$ objective lens.
- 3 Measure the width of the xylem vessel using an eyepiece graticule.
- 4 Multiply the number of eyepiece graticule units by the calibration of the eyepiece graticule.

- A** 1, 2, 3 and 4
- B** 1 and 2 only
- C** 2, 3 and 4 only
- D** 3 and 4 only
