

- 18** Eukaryotic organisms grow and increase in size as a result of cell division. The diagram shows some stages of mitosis with one stage missing, labelled X.

What happens in stage X?

- A** Spindle fibres attach to the centromeres and the chromosomes line up along the equator.
- B** The chromatin coils and condenses and the nuclear membrane disintegrates.
- C** The chromosomes line up in pairs along the equator of the cell.
- D** Microtubules shorten so that spindle fibres contract and the centromeres divide.
