

6(a)	line pointing to any chromatid ; 	1
6(b)	anaphase ;	1
6(c)	any two from: (fully formed) spindle seen / spindle fibres, are visible ; <i>idea that</i> chromatids are attached to, the spindle fibres / (spindle) microtubules ; <i>idea that</i> chromosomes would have orientated at the equator (ready for anaphase) ; sister chromatids have separated (Fig. 6.1) because, spindle fibres have contracted / microtubules have disassembled / AW ; in anaphase so has, completed /AW, prophase / metaphase ;	2
