

**4** Which statement is correct?

- A** Prokaryotes and chloroplasts have circular DNA where genes carrying the code for cell walls are located.
- B** Prokaryotes and chloroplasts have 70S ribosomes that are the sites for translation and polypeptide synthesis.
- C** Prokaryotes and mitochondria have an outer membrane and a separate inner, folded membrane where ATP synthesis occurs.
- D** Prokaryotes and mitochondria have double-stranded linear DNA where genes carrying coded information are located.
