

2(a)	involve mitosis: 1 / 3 ; involve meiosis: 4 ; produces new genetic variation: 2 / 4 ; shows only haploid cells: 1 / 5 ; ignore 2 shows only diploid cells: 3 ; ignore 2	5
------	--	----------

Question	Answer	Marks
2(b)	any four from: 1 genetic variation ; 2 due to, crossing over / independent assortment ; 3 some will, be adapted (to changing environment) / survive or 4 avoids whole population being wiped out / ora ; 4 (allows) stage 1 / stage 3 / asexual reproduction ; 5 (allows) random, mating / fertilisation / fusion of gametes ; 6 some have advantageous combinations of alleles ; 7 AVP ; e.g. <i>ref. to dormancy</i>	4
2(c)	any three from: <i>haploid</i> 1 only cell with harmful mutation will, be affected / die ; 2 rest of population unaffected / AW ; <i>diploid</i> 3 recessive allele for harmful mutation, will be masked by dominant (normal) allele / not expressed in heterozygote ; 4 AVP ; e.g. (haploid) removes mutated allele from population	3
2(d)	any two from: 1 eukaryotic (cells) / described ; 2 heterotrophic / saprotrophic / parasitic / described ; 3 chitin cell walls ; 4 (most have) hyphae / mycelium ; 5 multinucleate (cells) ; 6 multicellular and unicellular ;	2
