

12 What occurs during protein denaturation by extremes of pH?

- 1 breakage of peptide bonds leading to loss of shape of active site
- 2 disruption of existing ionic bonds between amino acid R-groups
- 3 loss of α -helical regular arrangement of amino acids
- 4 loss of protein tertiary structure resulting in loss of function

- A** 1, 2, 3 and 4
- B** 2, 3 and 4 only
- C** 1 and 3 only
- D** 2 and 4 only
