

- 1 (a)** Amylose and the triglyceride stearin are macromolecules.

Explain why amylose and stearin are macromolecules, but only amylose is a polymer.

..... [2]

- (b)** Students used the enzyme maltase extracted from the fungus *Aspergillus oryzae* to investigate the properties of enzymes.

Fig. 1.1 is a diagram of a maltose molecule.

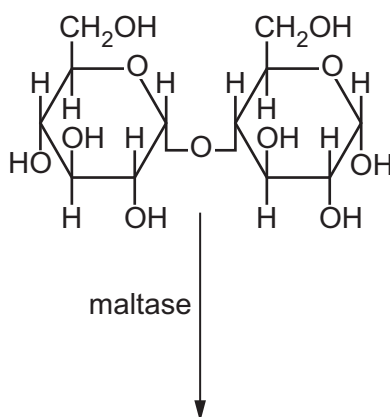

Fig. 1.1

- (i) Complete Fig. 1.1 to show the reaction catalysed by maltase.

[3]

- (ii)** State the type of covalent bond that is broken in the reaction.

..... [1]

- (iii)** State the type of reaction catalysed by maltase.

..... [1]

[Total: 7]

Question 2 starts on page 4.
