

- 16** The human immunodeficiency virus produces a long polypeptide that is hydrolysed by a protease enzyme, producing several smaller peptides. This viral protease is the target of anti-AIDS drugs.

Which feature is essential for the success of these drugs?

- A** a complex structure that inhibits many types of viral enzyme
- B** a molecule containing a heavy metal atom that is a non-competitive inhibitor of enzymes
- C** a protein that can act as a competitive inhibitor of protease enzymes
- D** a specific structure that inhibits only viral protease
