

- 37** An antibiotic inhibits the formation of cross-links between the molecules that form cell walls in bacteria.

Which statements explain why bacteria are killed by the antibiotic?

- 1 The bacterial cell is destroyed by osmotic lysis.
- 2 Cellulose molecules cannot form hydrogen bonds.
- 3 The cell wall is no longer selectively permeable.

A 1 and 2 only **B** 2 and 3 only **C** 1 only **D** 2 only
