

- 31** When active tissues have high carbon dioxide concentrations, oxyhaemoglobin needs to release oxygen to the tissues.

How is the carbon dioxide transported away by the blood from the tissues?

- 1 as carboxyhaemoglobin
- 2 as carbaminohaemoglobin
- 3 as hydrogencarbonate ions

A 1, 2 and 3 **B** 1 and 3 only **C** 2 and 3 only **D** 2 only
