

Question	Marking Guidance	Mark	Comments
01.1	(Nerve impulse/depolarisation of membrane) causes Ca^{2+} channel (proteins) to open; Ca^{2+} enter by (facilitated) diffusion; - Causes (synaptic) vesicles to fuse with (presynaptic) membrane;	3	Accept single reference to ions to cover 1 and 2 Penalise once for no reference to ions - Reject carrier proteins - Reject ref to release of vesicles - Ignore vesicles bind to membrane (but accept merge with)
01.2	- Myosin head attaches to actin and bends/performs powerstroke; (This) pulls mitochondria past/along the <u>actin</u>; - Other/next myosin head attaches to actin (and bends/performs powerstroke);	2 max	- Accept change shape/change angle - Ignore pulls actin along - Ignore refs to cytoskeleton Accept plural or singular statements
01.3	(Mitochondria) supply (additional) ATP/energy; - To move vesicles/for active transport of ions/for myosin to move past actin OR Re-synthesis/reabsorption of neurotransmitter/named neurotransmitter;	2	- Reject produces energy - Ignore ref. to ATP for opening calcium ion channels/making vesicles fuse with membrane
