

- 20** The diagram shows part of the organisation of a section of a DNA molecule and the associated histones, P and R, in prophase of mitosis.

Which statement about the features labelled P, Q and R during prophase of mitosis is correct?

- A** The coiled DNA molecule forms Q and wraps around histone R to form small clusters held in place by histone P.
- B** The groups of histones, P, and its associated DNA, Q, move closer together as the chromosome condenses around R.
- C** The histones P and R are made of protein around which the DNA molecule, Q, is wrapped so that the DNA molecule can fit inside the nucleus.
- D** The linked groups of histones P and R and the associated DNA, Q, form strands that fold and twist together to form a chromatid.
