

31 The graph shows the oxygen dissociation curves of haemoglobin for eight species of mammal.

What can be concluded from the data shown in the graph?

- A** The haemoglobin of larger mammals will combine with oxygen at a lower partial pressure of oxygen than that of smaller mammals.
- B** The haemoglobin of larger mammals will release oxygen at a higher partial pressure of oxygen than that of smaller mammals.
- C** The metabolic activity of the mammal is directly proportional to the ability of its haemoglobin to release oxygen.
- D** The size of the mammal is directly proportional to the ability of its haemoglobin to release oxygen.
