

9(a)	any two from: 1 accessory pigment ; 2 absorbs light wavelengths not absorbed by, reaction centre / primary pigment / chlorophyll a ; 3 so extends the range of wavelengths absorbed ; 4 pass energy to, reaction centre / primary pigment / chlorophyll a ; 5 <i>idea that</i> improves efficiency of light-dependent stage ;	2
9(b)(i)	1 rate of photosynthesis / rate of oxygen production, increases then levels off in both (plants) ; 2 rate of mutant plants higher than rate of normal plants ; 3 comparative data quote ;	3
9(b)(ii)	any four from: 1 absorbs more light ; 2 so faster rate of, photosynthesis / light-dependent stage ; 3 more ATP and reduced NADP produced ; 4 more turns of Calvin cycle / AW ; 5 more, triose phosphate / TP, produced ; 6 more, hexose/ AW, for respiration ; 7 more energy for growth ; 8 more synthesis of, amino acids / proteins / lipids / cellulose / starch ;	4
