

7(a)(i)	R – (sister) <u>chromatids</u> ; S – <u>centromere</u> ;	2
7(a)(ii)	any three from: 1 have same genes ; R same number of genes 2 (genes at) same, loci / position on a chromosome ; 3 same position of, S / centromere ; 4 same length ; 5 forms bivalent ;	3

Question	Answer	Marks
7(a)(iii)	 top 3 different on each pair all same on each pair	2
7(b)	<u>prophase 1</u> ;	1

Question	Answer	Marks
7(c)	any three from: 1 homologous chromosomes / bivalents, align independently of each other ; 2 at the, equator / metaphase plate ; 3 <i>idea that</i> this leads to different combinations of chromosomes in the daughter cells ; 4 results in new combinations of alleles ; 5 AVP ; e.g. in humans $2^{23} / 2^n$, different combinations	3
