

- 20 The photomicrograph shows plant cells in different stages of the mitotic cell cycle. Four of the cells are labelled with a number to identify them.

One of the numbered cells is within the main stage of mitosis in which the spindle begins to form.

A second numbered cell is within the main stage of mitosis in which the spindle fibres shorten.

Which row correctly identifies the two cells that are in these stages of mitosis?

	stage in which spindle begins to form	stage in which spindle fibres shorten
A	1	2
B	2	1
C	3	1
D	4	2
