

Question number	Answer	Additional guidance	Mark
5(a)	An explanation that includes the following points: • (pollen grains from) cereal crops {begin to appear / (start to) increase} when humans {farmed / grew} cereal crops (1) • {increase in (pollen from) cereal crops / (pollen from) beans start to appear} when more {humans to feed / food needed} (1) • the (pollen grains from) trees decreases as more {land is being farmed / more trees cut down for buildings} (1)	NB ACCEPT name of plant instead of pollen throughout ACCEPT other uses of trees / wood	(3)

Question number	Answer	Mark
5(b)(i)	The only correct answer is B <i>A is incorrect because the maximum value is 16 and the minimum value is 8 so the difference is 8</i> <i>C is incorrect because the maximum value is 16 and the minimum value is 8 so the difference is 8</i> <i>D is incorrect because the maximum value is 16 and the minimum value is 8 so the difference is 8</i>	(1)

Question number	Answer	Additional guidance	Mark
5(b)(ii)	An explanation that includes five of the following points: • (body was preserved) as {conditions / named condition} (in bog) were not suitable for {<u>decomposition</u> / <u>decay</u>} to take place (1) • (cold temperatures meant that) (microbial) enzymes were working slowly (1) • {(low) pH / acid conditions} not suitable for {bacteria to survive / bacteria to grow / (microbial) enzymes to function / enzymes denature} (1) • water-logged bog meant that {oxygen levels were (very) low / conditions were anaerobic} (1) • so not enough {energy released / ATP produced} by respiration (for the microorganisms) (1) • bog protected body from {insects / animals / scavengers} (1)	ACCEPT {bacteria / fungi / decomposers} for microorganisms ACCEPT slow IGNORE denature DO NOT ACCEPT enzymes killed ACCEPT specified reason e.g. waterlogging prevented maggots from being there	(5)
