

- 22** XNA is a laboratory-made nucleic acid. XNA is made of nucleotides in which one component has been replaced by chemical X. The chemical X is organic but is **not** found in nature. The part of the molecule responsible for coding is **not** changed.

Which component of a DNA or RNA nucleotide has been replaced by the organic chemical X?

- A** five-carbon sugar
- B** phosphate group
- C** purine base
- D** pyrimidine base
