

Question	Marking Guidance	Mark	Comments
01.1	B: is hydrolysed in the ileum and a product of this hydrolysis is found in micelles; A: is formed by a condensation reaction between two α-glucose molecules; C: is formed by the action of DNA polymerase; B: gives a positive result in an emulsion test;	4 (4 x AO1)	

Question	Marking Guidance	Mark	Comments
01.2	- Facilitated diffusion of amino acid (into cell when higher concentration in lumen); - Co-transport; - Sodium ions actively transported from cell to blood/capillary/tissue fluid; - Creating sodium ion concentration/diffusion gradient; - Facilitated diffusion of amino acid into blood/capillary;	4 max (4 x AO1)	- and 5. Accept diffusion via channel/carrier proteins for 'facilitated diffusion' - Accept 'pumped' for transported - and 4. Accept Na^+ for sodium ion(s) - and 4. Max 1 if ions not mentioned
