

- 1 The photograph shows an aquatic plant, *Cabomba caroliniana*.

(Source: © Dorling Kindersley Ltd/Alamy Stock Photo)

These plants live in ponds, lakes and slow-flowing rivers in North and South America.

If the stem of the plant is cut underwater, bubbles of oxygen gas are released from the cut end of the stem during photosynthesis.

(a) Describe an experiment to investigate the effect of temperature on the rate of photosynthesis in *Cabomba caroliniana*.

(5)

[illegible]

(b) Describe how oxygen is produced during photosynthesis.
