

7 Which statements about peptide bond formation are correct?

- 1 The bond formation occurs between a carbon of one amino acid and a nitrogen of the next amino acid after the amino acids detach from tRNA.
- 2 The bond formation occurs at the ribosome while the amino acids are still attached to tRNA, and is a hydrolysis reaction.
- 3 The bond formation is important for growth of an organism and when the bond forms, a water molecule is removed.

A 1 and 3

B 2 and 3

C 2 only

D 3 only
