

80 In rabbits, there are two alleles concerned with dark pigment in the fur:

- the dominant allele, B, for black colour
- the recessive allele, b, for brown colour

Two male black rabbits of unknown genotype each mated with a different female brown rabbit.

What is the expected proportion of brown offspring if both male rabbits are heterozygous, and what is the expected proportion of brown offspring if only one male rabbit is heterozygous?

	<i>expected proportion of brown offspring</i>	
	<i>if both male rabbits heterozygous</i>	<i>if only one male rabbit heterozygous</i>
A	0.25	0.5
B	0.25	1
C	0.5	0.25
D	0.5	1
E	1	0.25
F	1	0.5
