

- 16** In an experiment, pieces of onion epidermis are put into three different concentrations of sucrose solutions, P, Q and R. The pieces of onion are left for an hour and then examined using the low power of a light microscope.

Each diagram shows one cell from the epidermis that was placed in each of the sucrose concentrations.

What explains the appearance of cells in solution Q?

- A** The concentration of solution Q is equal to the concentration of the solutes in the cell sap.
- B** The cytoplasm has the same concentration of sucrose as solution Q.
- C** The water potential of the cytoplasm is equal to the water potential of the vacuole.
- D** The water potential of the cell sap is equal to the water potential of solution Q.
