

9(a)	<i>any nine from:</i> <i>cyclic photophosphorylation:</i> 1 (only) PSI / P700, involved ; 2 light <u>energy</u> absorbed ; 3 (results in) electron excited / AW ; 4 (electron) emitted from chlorophyll ; 5 chain of electron carriers / ETC ; 6 ATP synthesis ; 7 electron returns to, PSI / P700 ; <i>photosystems:</i> 8 pigments arranged in light-harvesting clusters ; 9 primary pigment / chlorophyll a / reaction centre ; 10 accessory pigments / chlorophyll b / carotenoids, surround, primary pigment / reaction centre / chlorophyll a ; 11 photosystem located in thylakoid ;	9
------	--	---

Question	Answer	Marks
9(b)	<i>any six from:</i> <i>formation:</i> 1 both photosystems involved ; 2 photolysis of water ; 3 H^+ released from, PSII / P680 ; 4 e^- released from, PSI / P700 ; 5 e^- and H^+ / both, combine with NADP (to form reduced NADP) ; <i>use:</i> 6 reduces GP / AW ; 7 TP formed ; 8 (takes place in) stroma ;	6
