

- 8 A student was provided with a solution of carbohydrate. They removed two samples from the solution and performed tests on each sample, as shown.

Which statement explains the results?

- A** Condensation reactions occur in sample two to release reducing sugar.
- B** Glycosidic bonds in a polysaccharide have been broken to release reducing sugar.
- C** Sample one shows that sucrose is present in the carbohydrate solution.
- D** The change in colour to a yellow solution shows that glucose is present.
