

6(a)	<i>any three from</i> <i>idea that</i> water moves down a water potential gradient / from a high to low water potential / AW ; sucrose solutions produce differences in water potential inside the cell and externally <i>or</i> different concentrations of external sucrose solution produces different gradients of water potential ; high concentration of, sucrose / solutes, is, lower / more negative, water potential ; ora loss of water by osmosis out of potato cells lowers mass of block ; ora for gain of mass no net gain or loss means water potential inside and out are equal ;	3
6(b)	concentration where the, curve / line, crosses the x-axis (and use a reference table) <i>or</i> the concentration at which there is zero percentage change in mass (and use a reference table) ;	1
