

- 9 (a)** Antidiuretic hormone (ADH) is involved in the maintenance of a constant blood water potential.

A student drank 0.5dm^3 of water and the concentration of ADH in their blood was measured every 30 minutes for 3 hours.

Fig. 9.1 shows the results of this investigation.

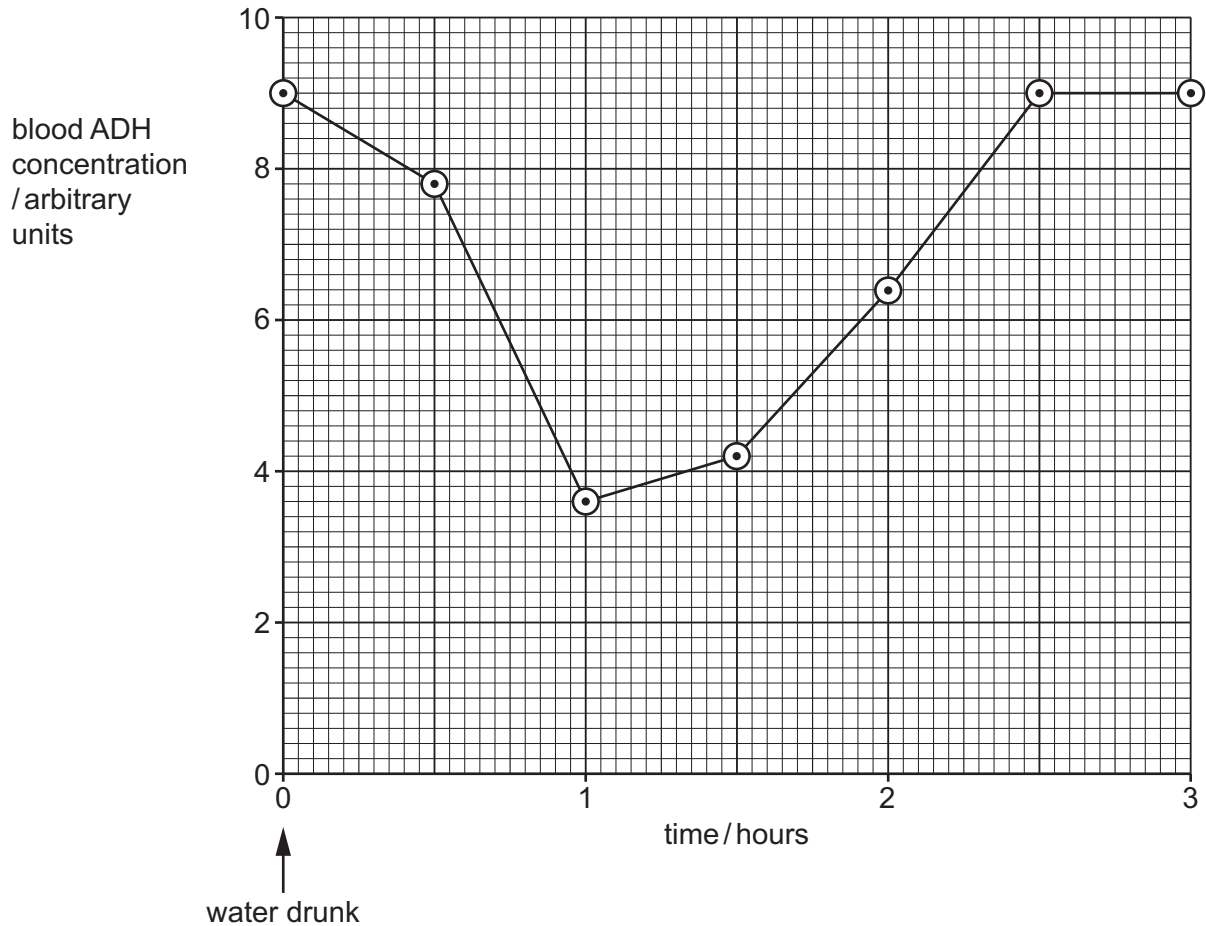

Fig. 9.1

Explain the results shown in Fig. 9.1.

[4]

(b) Outline the differences between the endocrine system and the nervous system.
