

5(a)	<i>any one from:</i> I too small presence of cilia ; A ciliated, cells / epithelial cells / epithelium AVP ; e.g. <i>suggestion that</i> mucus on surface makes detail not easily seen	1
5(b)	epithelium has goblet cells and ciliated epithelial cells ; A ciliated cells A two different cell types present I <i>ref. to</i> cell division <i>ref. to</i> staining ; e.g. use of stains gives different, shades / colours differential staining one cell type more neutral / acidic different parts of cells stain differently <i>idea of</i> cells have different densities ; e.g. <i>idea of</i> more structures / larger nucleus, gives greater density / AW R no cell structures <i>for lighter cell</i> I <i>ref. to</i> number of cilia (sectioning may include) more of nucleus so, affects light penetration / makes cell darker or AVP ; <i>idea of</i> different components in cells appearing, darker / lighter	2

Question	Answer			Marks
5(c)	<i>any three from:</i>			3
	A		B / cartilage	
	<i>max two for structure</i>			
	smooth muscle / composed of smooth muscle cells or no chondrocytes	or	no smooth muscle cells or has chondrocytes ;	
	cells close together	or	cells, (more) isolated / in gaps / in lacunae ;	
	cells, spindle shaped / elongated / AW	or	cells (more) rounded / AW ;	
	AVP structure e.g. not surrounded by, perichondrium / AW contains blood vessels	or	surrounded by, perichondrium / AW no blood vessels ;	
	<i>function</i>			
	contractile / contracts (and relaxes) I recoil A bronchi walls contract R bronchi contract	or	non-contractile ;	
	changes diameter of airways A controls size of lumen	or	protective / support ; A described e.g. prevents collapse of, bronchus or keeps bronchus open	
<i>if incorrectly quotes A as the cartilage, use right hand column to allow one mark max (ecf)</i>
