

- 1 A student was asked to use the scale bar shown to calculate the magnification of a cell on a photomicrograph.

Which method could the student use to calculate the magnification of the cell?

- A** divide the diameter of the cell by the length of the scale bar, with both measured in the same units of length
- B** measure the diameter of the cell in millimetres, multiply by 2000 and divide by the length of the scale bar measured in millimetres
- C** measure the length of the scale bar in millimetres, convert to micrometres and divide by 2
- D** measure the length of the scale bar in millimetres, convert to micrometres and multiply by 2
