

27 Which description of movement in phloem is correct?

- A** Adding sucrose to a sieve tube element increases its water potential so that water enters and increases the hydrostatic pressure.
- B** At a sink, such as a storage organ, sucrose is removed from a sieve tube element and polymerised into starch.
- C** At a source, such as a photosynthesising leaf, sucrose enters a sieve tube element by facilitated diffusion.
- D** At a source, sucrose is loaded into a companion cell using a protein that carries both hydrogen ions and sucrose molecules.
