

- 31** The table shows the results used to draw an oxygen dissociation curve for adult haemoglobin.

partial pressure of oxygen /kPa	1	2	3	4	5	6	7
volume of oxygen per gram of haemoglobin/ cm^3g^{-1}	0.11	0.32	0.58	0.77	0.96	1.07	1.15

What is the percentage increase in the volume of oxygen per gram of haemoglobin when the partial pressure of oxygen increases from 3 kPa to 5 kPa?

- A** 32.8% **B** 39.6% **C** 60.4% **D** 65.5%
