

1(a)(i)	A = dendrite(s) ; B = nuclei ; C = synaptic knob(s) ;	3
1(a)(ii)	1 rat has, myelin sheath / Schwann cell / myelinated axon / myelinated neurone ; 2 (rat has) saltatory conduction OR (rat) impulse / action potential, jumps / leaps / AW, from (one) <u>node of Ranvier</u> to, the next / another ;	2
1(b)	any three from: snail / Fig. 1.3 1 greater depolarisation OR (membrane potential) gets more positive / has higher increase / has higher peak ; 2 action potential, slower / takes longer / takes more time OR longer time to return to resting potential ; 3 longer (absolute / relative) <u>refractory period</u> ; 4 longer hyperpolarisation ; 5 AVP ;	3
