

2(a)	any two from: <u>amino acids</u> with hydrophilic R groups to, exterior / outside, (of molecule) A facing, watery / aqueous, environment / cytosol / cytoplasm or <u>amino acids</u> with hydrophobic R groups to, interior / centre / AW, (of molecule) ; A hydrophilic / hydrophobic, <u>amino acids</u> <i>must see amino acids somewhere in text to allow hydrophobic / hydrophilic ideas</i> soluble (in water / cytoplasm / cytosol) ; A forms colloidal suspension physiological / metabolic / dynamic, (role) ; I functional unless qualified e.g. <u>functional</u>, for example haemoglobin carries oxygen has a <u>functional</u> role / <u>functional</u>, not structural AVP ; e.g. non-repetitive / irregular, sequence(s) of amino acids <i>ref. to two or more bond types holding (3D) shape / tertiary structure / quaternary structure in place, but</i> R if peptide bonds listed	2					
2(b)	<table><tr><td>chloride ion / Cl^- ; I glucose</td></tr><tr><td>carbaminohaemoglobin ;</td></tr><tr><td>hydrogencarbonate (ion) ; A HCO_3^-</td></tr><tr><td>oxyhaemoglobin ;</td></tr><tr><td>hydrogen ion(s) ; A H^+ / proton</td></tr></table>	chloride ion / Cl^- ; I glucose	carbaminohaemoglobin ;	hydrogencarbonate (ion) ; A HCO_3^-	oxyhaemoglobin ;	hydrogen ion(s) ; A H^+ / proton	5
chloride ion / Cl^- ; I glucose
