

7(a)	<i>gene</i> length of <u>DNA</u> coding for a polypeptide ; <i>allele</i> alternative / different, form / version, of a gene ;	2
7(b)	<i>parents phenotypes</i> red eyes apricot eyes <i>parents genotypes</i> $C^R C^H$ $C^A C^W$ <i>gametes</i> (C^R C^H C^A C^W) <i>offspring genotypes</i> $C^R C^A$ $C^R C^W$ $C^H C^A$ $C^H C^W$; <i>offspring phenotypes</i> red eyes (red eyes) apricot eyes honey eyes ; <i>ratio</i> 2 : 1 : 1 ;	3
7(c)	1 cross with, white-eyed fly / $C^W C^W$; any two from: 2 if all red-eyed then $C^R C^R$; 3 if (some red-eyed and) some apricot-eyed then $C^R C^A$; 4 if (some red-eyed and) some honey-eyed then $C^R C^H$; 5 if (some red-eyed and) some white-eyed then $C^R C^W$;	3
