

- 16** An experiment was carried out to compare the effect of pH on the activity of an enzyme that was in solution and the same enzyme that had been immobilised on a gel. All other variables were kept the same.

The results are shown in the graph.

Which statement explains these results when the enzyme is immobilised?

- A** The primary structure has changed.
- B** The secondary structure has changed.
- C** The tertiary structure has changed.
- D** The quaternary structure has changed.
