

- 23** Bacteria were grown in a medium containing ^{15}N . After several generations, all of the bacterial DNA contained ^{15}N . Some of these bacteria were transferred to a medium containing the common isotope of nitrogen, ^{14}N . The bacteria were allowed to divide once. The DNA of some of these bacteria was extracted and analysed. This DNA was all hybrid DNA containing equal amounts of ^{14}N and ^{15}N .

The remaining bacteria were left in the medium with ^{14}N and allowed to divide one more time. The DNA of some of these bacteria was extracted and analysed.

What is the percentage of hybrid DNA?

- A** 25% hybrid DNA
- B** 50% hybrid DNA
- C** 75% hybrid DNA
- D** 100% hybrid DNA
