

- 25** The table shows the mode of action of two antibacterial drugs that can affect the synthesis of proteins.

| antibacterial drug | rifampicin              | streptomycin                 |
|--------------------|-------------------------|------------------------------|
| mode of action     | binds to RNA polymerase | causes errors in translation |

If bacteria are treated with the drugs rifampicin **and** streptomycin, what will be the immediate effects?

- 1 Transcription will stop but faulty proteins may continue to be synthesised.
- 2 If translation has started, proteins may be faulty.
- 3 Translation will be inhibited.

**A** 1, 2 and 3      **B** 1 and 2 only      **C** 1 and 3 only      **D** 2 and 3 only
