

9 Which statement about triglycerides is correct?

- A** Each triglyceride molecule is formed by combining three fatty acid molecules with a glycogen molecule.
- B** A triglyceride molecule contains four ester bonds, each formed in a condensation reaction.
- C** Triglyceride molecules form a bilayer in the cell surface membranes of cells due to hydrophobic and hydrophilic interactions.
- D** The ratio of oxygen atoms to carbon atoms is lower for triglyceride molecules than for carbohydrate molecules.
