

10 Which features are correct for triglycerides **and** phospholipids?

- 1 They have ester bonds between glycerol and fatty acids.
- 2 Fatty acid chains may have single or double bonds between carbon atoms in the chains.
- 3 The fatty acid chains are non-polar and hydrophobic.
- 4 Saturated fatty acid chains allow closer packing of the molecules than unsaturated fatty acid chains.

- A** 1, 2, 3 and 4
- B** 1 and 3 only
- C** 2, 3 and 4 only
- D** 2 and 4 only
