

0 3

Bees are flying insects that feed on nectar made in flowers. There are many different species of bee.

Scientists investigated how biodiversity of bees varied in three different habitats during a year. They collected bees from eight sites of each habitat four times per year for three years.

The scientists' results are shown in **Figure 4** in the form they presented them.

What is meant by 'species richness'?

[1 mark]

1. The natural habitat is most favourable for bees.
2. The town is the least favourable for bees.

[4 marks]

1. The natural habitat is most favourable for bees.

[illegible]

2. The town is the least favourable for bees.

[illegible]

0 3 . 3

The scientists collected bees using a method that was ethical and allowed them to identify accurately the species to which each belonged.

In each case, suggest **one** consideration the scientists had taken into account to make sure their method

[2 marks]

1. was ethical. _____

2. allowed them to identify accurately the species to which each belonged.

0 3 . 4

Suggest and explain **two** ways in which the scientists could have improved the method used for data collection in this investigation.

[2 marks]

1. _____

2. _____
