

7(a)	<i>any four from:</i> 1 base / nucleotide, insertion / deletion / substitution ; 2 frameshift / changed reading frame ; 3 <i>ref. to</i> stop codon ; 4 changes / different, primary structure / amino acid sequence ; 5 changes / different, folding / 3D shape / 3° structure, of enzyme / protein ; 6 <u>active site</u> does not, bind / fit, substrate / complex molecules ;	4
------	--	----------

Question	Answer				Marks
7(b)	1	key	e.g. H = normal (allele) h = Hunter (syndrome allele) ;		5
		parental phenotype	normal male	normal female	
	2	parental genotype	X^HY	X^HX^h ;	
		gametes	(X^H Y	X^H X^h)	
	3	offspring genotypes	X^HX^H X^HX^h	X^HY X^hY ;	
	4	offspring phenotypes	normal female normal / carrier female	normal male Hunter S ; male	
	5	probability	0.25 / 25% / 1 in 4 ;
