

- 31** An increase in carbon dioxide in human blood shifts the oxyhaemoglobin dissociation curve to the right.

What is the explanation for this effect?

- A** An increase in carbon dioxide concentration increases the breathing rate.
- B** Carbon dioxide is more soluble than oxygen and displaces it.
- C** Diffusion of carbon dioxide between the alveoli and the blood is more rapid.
- D** Increasing the H^+ concentration decreases haemoglobin affinity for oxygen.
