

29 A student wrote the following statements about a possible mechanism for loading sucrose from a source.

- 1 When energy is released from ATP, the released energy is used to move sucrose through a co-transporter protein in the companion cell membrane.
- 2 As sucrose is moved into a companion cell the pH in the cell wall of the companion cell decreases.
- 3 Proton pumps in the cell membrane of a companion cell move sucrose into the phloem sieve tube element.

Which statements are correct?

- A** 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 only
