

4(a)

protein	location
myosin and actin	B
actin alone	C
ATP synthase	A
ATPase	B

Question	Answer	Marks
4(b)	<i>any five from myosin binding site exposed then</i> 1 myosin head, binds to actin / forms cross bridge ; 2 ADP released causes motion of myosin head ; 3 actin moved ; 4 power stroke ; 5 ATP binds to myosin head ; 6 myosin head detaches from actin ; A cross bridge broken 7 (myosin head / ATPase) causes, hydrolysis of ATP / $\text{ATP} \rightarrow \text{ADP} + \text{Pi}$; 8 myosin head moves back to original position / AW ; 9 (ATP needed) to pump Ca^{2+} back into sarcoplasmic reticulum ;	5
