

8(a)	any three from: 1 DNA (sample) ; 2 primers ; 3 (free) DNA nucleotides ; 4 heat-stable DNA polymerase / <i>taq</i> polymerase ; 5 buffer solution ;	3
8(b)	any seven from: 1 <u>denaturation</u> at 90–98 °C ; 2 breaks hydrogen bonds (in DNA) ; 3 to, produce single strands / separate the (two) strands ; 4 <u>annealing</u> at 50–65 °C ; 5 (so that) primers, anneal / bind, (ss)DNA / complementary bases ; 6 extension / elongation, at 65–75 °C ; 7 <i>Taq</i> polymerase binds to primer or primer provides, binding site / starting point, for <i>Taq</i> polymerase ; 8 <i>Taq</i> polymerase joins, (free) nucleotides / dNTPs, (to single strands) ; 9 to synthesise, complementary / doubled stranded / new, DNA ;	7
