

40 The statements describe ways in which different types of monoclonal antibodies can work.

- 1 binding to proteins on cell surfaces and triggering the immune system
- 2 blocking molecules on cell surfaces that inhibit T-cells
- 3 blocking cell signalling receptors that trigger cell division
- 4 blocking cell signalling receptors that trigger the immune response

Which types of monoclonal antibody could be used to treat cancer?

- A** 1, 2, 3 and 4
- B** 1, 2 and 3 only
- C** 1 and 4 only
- D** 2, 3 and 4 only

Permission to reproduce items where third-party owned material protected by copyright is included has been sought and cleared where possible. Every reasonable effort has been made by the publisher (UCLES) to trace copyright holders, but if any items requiring clearance have unwittingly been included, the publisher will be pleased to make amends at the earliest possible opportunity.

To avoid the issue of disclosure of answer-related information to candidates, all copyright acknowledgements are reproduced online in the Cambridge International Examinations Copyright Acknowledgements Booklet. This is produced for each series of examinations and is freely available to download at www.cie.org.uk after the live examination series.

Cambridge International Examinations is part of the Cambridge Assessment Group. Cambridge Assessment is the brand name of University of Cambridge Local Examinations Syndicate (UCLES), which is itself a department of the University of Cambridge.
