

11 Which description of collagen is correct?

- A** A collagen molecule consists of three polypeptide chains, each in the shape of a helix. The three chains are wound together into a triple helix called a fibre.
- B** A collagen molecule consists of three polypeptide chains, each of which is an α -helix. The three chains are wound tightly together into a triple helix. Many of these triple helices bind together as a fibre.
- C** A collagen molecule consists of three polypeptide chains wound tightly into a triple helix called a fibre.
- D** A collagen molecule consists of three polypeptide chains in which every third amino acid is glycine. The three polypeptides are wound tightly together into a triple helix. Many of these helices form a fibre.
