

- 5** Dialysis (Visking) tubing is an artificial partially permeable membrane with pore sizes of approximately 2.5 nm. Glucose molecules have a diameter of about 1.5 nm and can pass through the pores in the membrane.

What else can pass through the pores?

- 1 bacteria
- 2 haemoglobin
- 3 ribosomes
- 4 fructose

A 1 and 3 **B** 2 and 4 **C** 2 only **D** 4 only
