

2 The actual length of a cell structure is $8\text{ }\mu\text{m}$.

Which steps are used to calculate the magnification of an electron micrograph of this cell structure?

- 1 measure the length of the cell structure image on the micrograph in centimetres
- 2 measure the length of the cell structure image on the micrograph in millimetres
- 3 divide the image length by 1000
- 4 multiply the image length by 1000
- 5 divide by eight
- 6 multiply by eight

A 1, 3 and 6 **B** 1, 4 and 6 **C** 2, 3 and 5 **D** 2, 4 and 5
