

1(a)(i)	(auxin) receptor (protein) / auxin binding protein ;	1
1(a)(ii)	B – proton / H^+ / hydrogen ion, <u>pump</u> ; C – potassium / K^+ / ion, channel / pore ; D – <u>aquaporin</u> ;	3
1(b)	any three from: 1 (cell wall) pH decreases / becomes more acidic ; 2 <u>expansins</u> ; 3 break / loosen, non-covalent, bonds / cross-links ; 4 <u>between</u> cellulose and, hemicellulose / matrix / calcium pectate or <u>between</u> cellulose <u>microfibrils</u> ; 5 cell wall, expands / stretches OR microfibrils move past each other ; 6 due to turgor pressure (on wall) ;	3
1(c)	any two from: 1 water potential, decreases / becomes more negative ; 2 water moves into cell, by osmosis / down water potential gradient ; 3 cell, expands / increases in volume / elongates ;	2
